

<b>Course: BSc(Hons) Applied Software Development (UI310)</b>
---

Module: Data as a Service
---------------------------

This module complements Data Transformation and aims to provide students with how to present data effectively to a customer. From Education to Finance, users value being able to see data presented in an attractive way, be it a chart, table or infographic. This module provides you with experience of implementing a set of visually attractive infographics and dashboards that will allow you to draw users in. This module will also explore using third party data APIs and how to open a dataset for others to query from their own applications.
