

Course: BSc(Hons) Applied Software Development (UI310)

Module: Data Languages

This module complements the Databases module and focuses on the use of Data languages to scale across multiple platforms. Students will be introduced to considerations in project scheduling and the business requirements for time management. Teams will learn how to share feedback with each other effectively to solve project tasks to a higher standard. The technical focus will be on the use of NoSQL databases and use of JSON and XML as data transmission standards.
