

Course: BSc(Hons) Applied Software Development (UI310)

Module: Enterprise Transformation

This module complements "The Long Tail of the Software Cycle", however, it focuses on the transformation of existing systems. Students are introduced to planning and managing the transition of a live system to a new version. The module provides students with the skills to evaluate a business' position in the market and compare it to its competitors. Students will also deepen their knowledge of performance evaluation tools.
