

Course: BSc(Hons) Applied Software Development (UI310)

Module: Insight from Data

This module complements the "Data-led Decision Making" module and focuses on the conversion of data into knowledge. In Year 2 students learned to manipulate data into information that could be visualised; in this module students will learn how to develop that information into knowledge that decisions could be derived from. This module introduces students to the legal and ethical considerations when working with personal data. Students will learn how to manage data security and the importance of this from both a human and technical perspective.
