

Course: BSc(Hons) Applied Software Development (UI310)

Module: Large Software Challenge

This module provides students with the opportunity to tackle a large Challenge Project and to manage it through the entire development lifecycle. Students will get to choose a single project from industry, the community, public competitions as well as their own concepts. Students will vote for the projects that most excite them and then they will be organised into teams to tackle them. These teams will last the academic year as students plan, implement, test and evaluate their product, developing both the product and the business opportunity. The module will allow the students to demonstrate all the skills and knowledge they have practiced over the previous three years, and engage with other tools and services that they need to bring their concept to life.
