

## **UB711001: Applying Research Skills for Clinical Impact**

**SCQF Level 11:** 60 Credits

**Module Length:** One academic year

**Semester:** Autumn

### **Learning Outcomes**

- Investigate a major issue of clinical concern from the existing research literature.
- Conduct an effective and relevant literature search with a critical appraisal.
- Appreciate and critique the relevance of various tools and techniques to gather empirical data with appropriate application to the chosen investigation.
- Conduct the project applying appropriate research skills with supervision.
- Demonstrate skills with data analysis and relevant interpretation with implications for practice.
- Acquire and demonstrate a clear understanding of ethics, and clinical governance principles in relation to their chosen area of service development.

### **Mode of study**

Part-time (Structured): Monthly seminars lead by a study supervisor to discuss progress and share learning using the university's virtual learning environment (VLE) or via video conferencing. In addition, each student will have dedicated support from a study supervisor to provide support for their writing their dissertation.

### **Study Sessions**

Seminar times to be confirmed with supervisor

### **Assessment**

A dissertation of approximately 15,000 words (+/-10%)
